Product Short Description :

DISCONTINUED

Please see the new MXR M303 Clone Looper

When we developed the PDS 8000 looper pedal over twenty years ago, it looped eight seconds of audio. When we reinvented loopers in 2005 with the original JamMan®, over 6 hours worth of material could be stored on a removable media card. Now, DigiTech® has raised the bar with the new JamMan Stereo Looper with the ability to store 35 minutes of CD-quality loops in 99 internal memories as well as having an SD memory card expansion slot giving you the ability to store over 16 hours* of material in an additional 99 slots.

The JamMan Stereo also features true stereo looping, reverse playback, and a mic input making it perfect for backing tracks or DJ applications.

The JamMan Stereo features USB connectivity and will sync to DigiTech’s free JamManager XT™ software that organizes and saves your JamMan Stereo loops to PC or Mac. JamManager also lets you quickly create custom JamLists to take to your gig.
