

Keene A52F Folding Sluice Box

This super lightweight, aluminum folding sluice box incorporates the latest technology in rubber riffles. We have taken the best parts of our previous folding plastic sluice and introduced our highly successful rubber riffle design. This unique design works fantastic in both fast and slow water conditions. Great for backpacking to those remote gold bearing locations!

The A52F can be expanded into a highbanker/dredge system if you want to increase production and get more gold.
