Fender Acoustasonic 150 Combo Amp

The Acoustasonic 150 packs full acoustic resonance and crystal clarity into a lightweight (only 22.5 lbs.) amp with a new

ultra-efficient 150-watt (2×75) stereo power amp, dual 8 inch foam-surround low-frequency drivers and high-frequency tweeter. Its new Voicing control lets any guitar simulate the tonality of parlor, dreadnought and jumbo acoustics, or Voicing can be turned off for pure amp output response. For acoustic players who double on electric guitar, the Voicing control also has Blackface, tweed and British amp settings, which makes a second amp just for electric guitar unnecessary.

Other features include instrument and microphone channels with independent EQ and effects controls; new feedback elimination control with on/off switch for each channel; patented String Dynamics™ control that tames harsh treble notes; effects including reverb, delay, chorus, Vibratone, and more; XLR line out with level control and ground lift; stereo effects loop; USB connector for digital recording output (and possible future firmware updates); strong five-ply plywood construction and optional two-button effects select footswitch.
