Akai MPD226 USB Pad Controller

The MPD226 is a MIDI-over-USB pad controller perfect for producers, programmers, musicians and DJs alike. Its intuitive blend of MPC controls and technologies mesh with easy USB connectivity to bring the feel of classic beat making into the world of computer music production.

First, we stepped up our game by adding new, ultra sensitive Thick Fat MPC pads, creating an amazingly responsive user experience. The MPD226 has an expanded control set featuring four knobs, four faders, four buttons arranged in three banks for 36 total controls versus 12 on the MPD26. This will enable you to maximize your sound and give you increased control over effects.

MIDI information is sent over its plug-and-play USB interface for use on Mac or PC, eliminating the need to install any drivers.

Along with the improved functionality we've added iOS compatibility using the Camera Connection Kit (sold separately) and included over $400 of free software. Titles include: Akai Pro MPC Essentials, Big Bang Drums and Big Bang Cinema from Sonivox, Ableton Live Lite, and Software Preset. The aforementioned Software Preset Editor allows you to enjoy intuitive control editing right from the front panel of the MPD226.

Our MPD2 Series marks an important evolution of the pad controller. Many years of research and customer feedback has led directly to some of the most capable pad controllers we've ever developed. These MPDs are the perfect bridge between your creativity and your computer-based studio.
