

Keene 1753H 3 Inch Highbanker – Dredge Combo With Honda GX200 (*Local Pickup Only)

This is Keene's 175 Combination Gold Dredge – Power Sluice, powered by a 6 HP Honda Engine with the addition of a 3 inch gold dredge suction nozzle, 15 feet of 3 inch suction hose and 17 feet of additional pressure hose to extend the suction system.

Net weight 107 pounds for sluice, hopper, and stand.

The sluice box works extremely well for dredging because the material is pre-classified before entering the sluice box.

Combination units are ideally suited for shallow water areas with the power sluice being so simple to set up and requiring less water than a standard gold dredge to operate. This combination model can be equipped with an air compressor for diving.
