Proline 2 Inch Highbanker-Dredge With GXH50 And HP100 Pump (*Local Pickup Only)

It’s powered by our HP100 pump, which is direct coupled to a Honda GXH50 engine, offering astounding performance in a

package that is lighter and quieter than previous models. There are some obvious advantages that come with using this engine: the famous Honda quality, low oil shut off, and the ease of no longer having to worry about those gas and oil mixtures. In addition, the HP100 is the perfect size and operates at the proper RPM to develop peak water volume and pressure required for optimum performance.

The unit is equipped with a large hopper, containing two spraybars, each with two rows of holes to ensure complete washing of dry and/or clay-bound gravel. Threaded caps allow for easy removal of any debris that passes through the pump, and the grizzly is easily removed to simplify cleanups. Fine gold recovery has been improved due to refinements in riffle profile and timing. Our extensive use of Nomad matting and triple classification makes for an unbeatable combination.

The sluice box is bolted to our sturdy stand for additional strength and the legs are easily adjusted for uneven terrain. Many owners of these machines have successfully mounted them to pack frames increasing their portability. There simply isn’t a more advanced dual-purpose unit available anywhere.
