Proline 3 Inch Highbanker-Dredge With GX160 And HP300 Pump (*Local Pickup Only)

The two triple row spray bars ensure that all of the gravel, clay, roots, etc. are thoroughly washed and separated before

running through the recovery system. The grizzly is designed to be strong yet surprisingly lightweight. Like all of our other grizzly’s, it is removable to allow for easy access to the classifier and black “V” ribbed matting for inspection and/or cleanup. Also, if the combo is going to be operated solely as a gold dredge, the grizzly can be removed to save weight.

The unit is powered by a Honda GX160 engine and Proline’s powerful HP300 pump. This is a higher pressure pump designed specifically for pushing water higher and further, making it ideal for high-banking. Proline supplies 15 feet of gold dredge hose standard, however, many customers upgrade to a longer hose.

Our use of a power jet provides maximum gold dredge vacuum with fewer rock jams compared to combos that rely in the old-fashioned, cumbersome, suction nozzles. This combo can be equipped with an air compressor kit, just like our 3″ gold dredge, if you wish to increase your gold dredging productivity. It’s no surprise that the Proline 3″ combo has seen such wide popularity with prospecting clubs, exploration companies, and miners who require a very versatile machine in a small, rugged package.
