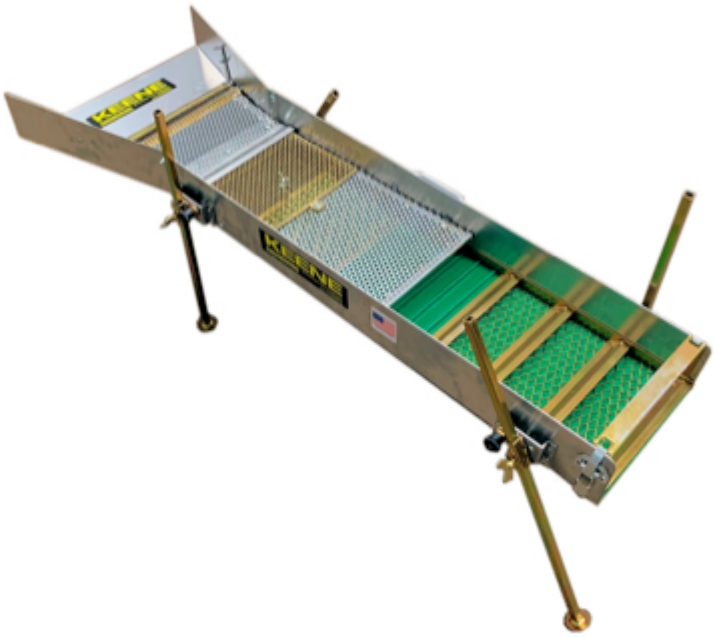
Keene A52S Super Sluice Box



Our Super Sluice Box is the first sluice that allows you to dump unclassified material through the box at much higher volumes than ever thought possible while still retaining fine gold! Not only does this sluice a eat material like no other,

it is the easiest and fastest sluice to set up in the world. I can’t tell you how many times it took me 20, 30 minutes, even an hour in some cases, walking up and down the river looking for just the right depth of rocks, water flows, etc. Now it takes only a few minutes to set up and get to work. Equipped with our upgraded Mini Max folding Leg system that a articulates 4 different positions independently. Each leg travels up and down as well.

The screen system features a mix of grizzly bars, a punch plate and woven wire which quickly classifies the material and drops the water speeds underneath to at least half! This allows the riffles to do their job in ideal conditions. We are using a mix of carpets, expanded metal, Hungarian riffles and our world famous Miracle matting. This combination provides the ultimate in regenerative riffle design that works even in heavy black sand areas. The variety of rifle designs performs exceptionally well in a multitude of conditions and is very forgiving if you tilt the box to the side or have disruptions in the water flow. It really holds on to the gold!

We have manufactured this sluice box with the highest possible quality we can achieve. The legs, latches, screens, and riffles are simply bulletproof and should last for years. The performance of this sluice box is “by far superior to anything on the market” We simply blow the competition away. This sluice box will find you more gold than any other box out there and you will not find a better sluice box to expand into dredges, high bankers and more than the Keene Super Sluice.

Net Weight 18.5 lbs
